Entrepreneurship

“The pursuit of opportunity, without regard for resources currently controlled”.

Howard Stevenson
Harvard Business School

Bret Waters

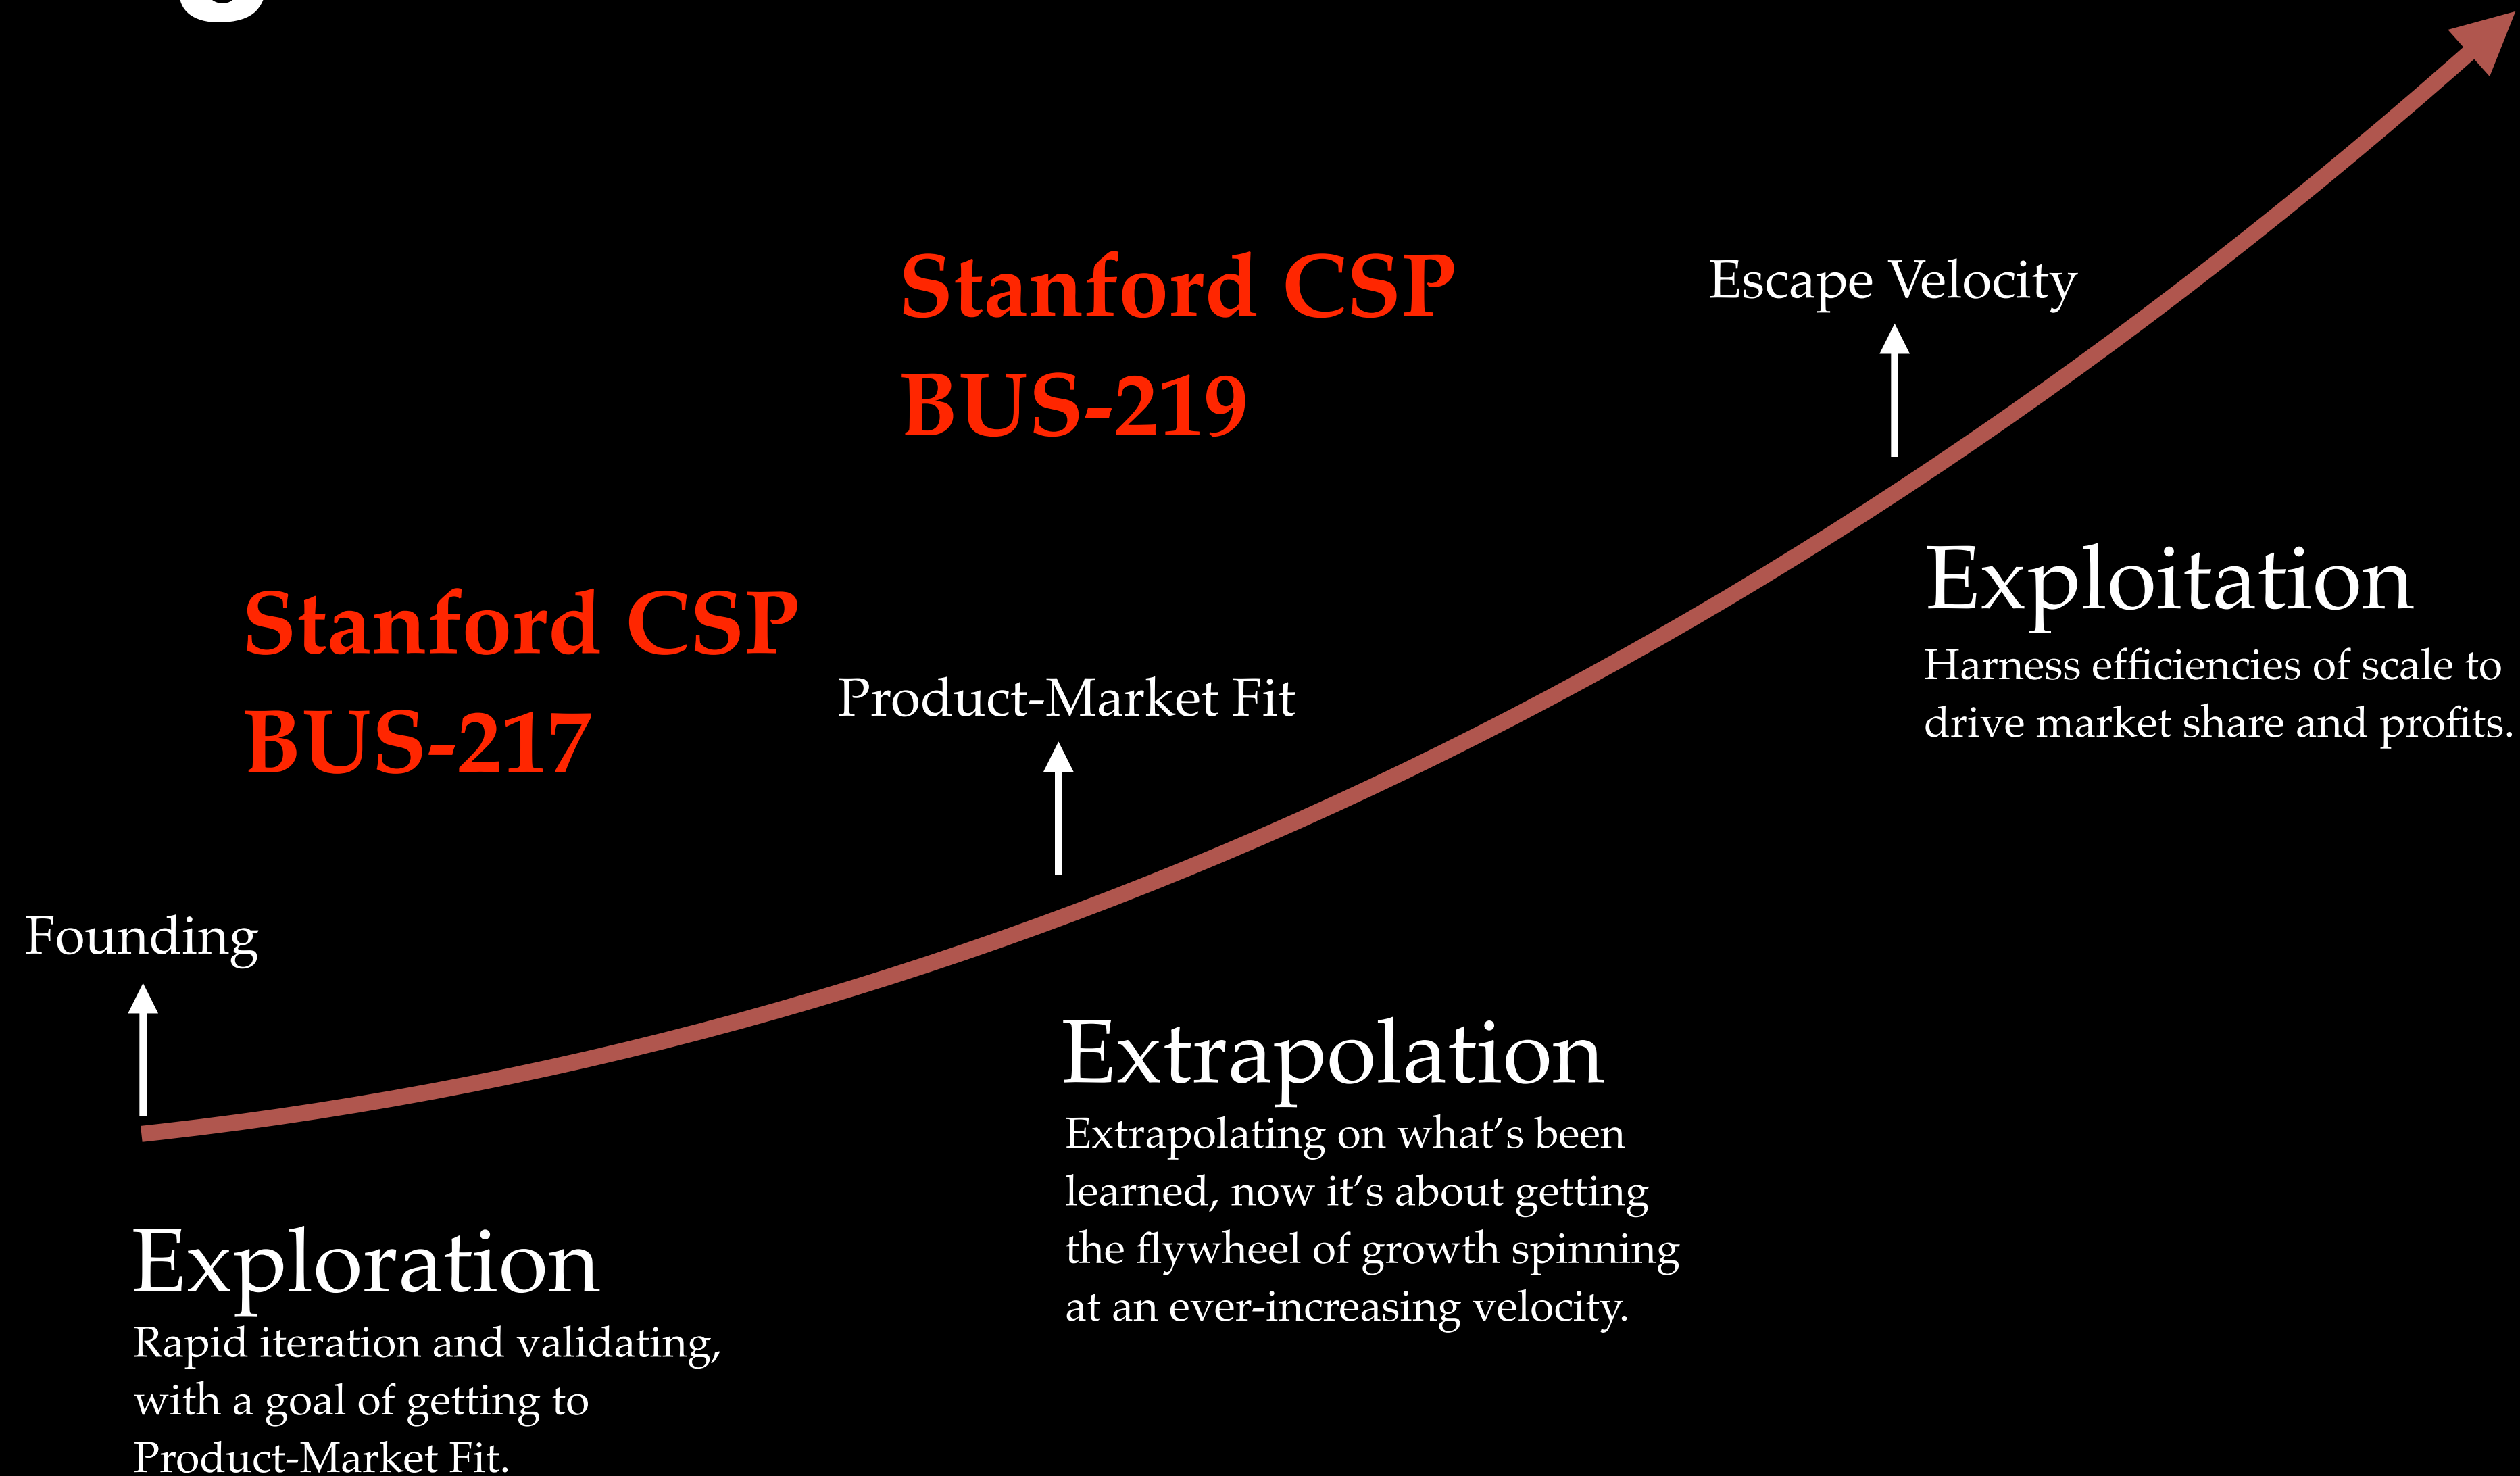

Founder and CEO of three Silicon Valley software companies:

- **Metagraphics – developed the first web-based document generation engine.
Sold to Linotext America.**
- **Artmachine – developed the first pure-SaaS digital media management system.
Sold to OpenText.**
- **Tivix – developed fintech systems for major banks around the world.
Sold to Kellton.**

**Now I teach two entrepreneurship
courses at Stanford.**

Stages of a venture.

Bret Waters

I also ran two nonprofit organizations:

- **President of Woodside School Foundation**

A 501(c)3 non-profit focused on local K-12 education, managing a \$10 million endowment.

- **Interim CEO of Stanford New Schools**

A 501(c)3 non-profit charter school management organization operated by Stanford University.

**For 15 years I've coached startup CEOs at
Miller Center for Social Entrepreneurship.**

**In getting from a startup idea to
a successful, growing venture,
what do you think matters most?**

Ideas are cheap. Execution is hard.

Most startup ideas fail. Investors know this and so they invest in founders who can execute a path to success when the original idea fails.

My goal with this course is to make you one of those founders.

Here are some ideas that failed, but now the business is worth billions.

YouTube's idea was a video dating site.

Android's idea was an OS for digital cameras.

Uber's idea was a fleet of company-owned cars, called "UberTaxi".

Instagram's idea was a mobile check-in app (like Foursquare) called "Burbn".

The Twitter team's idea was a Flash-based podcasting platform called "Odeo".

Slack's original idea was a video game studio.

“The verb you want to be using with respect to startup ideas is not “think up” but notice. The way to get startup ideas is not to try to think of startup ideas. It’s to look for problems.”

**- Paul Graham
Co-founder of Y-Combinator**

Uber was born when a group of friends spent \$800 to hire a private driver and then listened to the driver talk about how much downtime he had every week, waiting for business.

Airbnb was born when roommates in San Francisco needed to rent out a spare bedroom to pay the rent.

Cisco was born when two computer administrators at Stanford were frustrated by slow network speeds.

This is often how great startups begin, when a founder notices a problem worth solving and **falls in love with solving that problem**

In my career, I've worked with hundreds of startup founders. I've seen patterns with regard to which ones succeed and which ones fail.

Based on these patterns, I've put together an 8-step process for getting from a startup idea to a launched and funded venture, poised for success.

That's what this course is about.

The Launch Path.

BUS-217: Eight steps to a successful startup.

- 1) Listen to the waves.**
- 2) Build something people want.**
- 3) Draw the landscape.**
- 4) Create an engine of growth.**
- 5) Engineer an economic model.**
- 6) Create a capital strategy.**
- 7) Frame a Funnel.**
- 8) Be a Master Storyteller.**

The Launch Path.

BUS-217: Eight steps to a successful startup.

- 1) Listen to the waves.**
- 2) Build something people want.**
- 3) Draw the landscape.**
- 4) Create an engine of growth.**
- 5) Engineer an economic model.**
- 6) Create a capital strategy.**
- 7) Frame a Funnel.**
- 8) Be a Master Storyteller.**

STEP 1:

Listen to the Waves.

The Launch Path

Step 1: **Listen to the Waves.**

Where do most startups begin?

Most great startups begin with a founder who notices a problem worth solving.

STEP 2:

Build something people want.

The Launch Path

Step 2: **Learn what people want**

Don't build something that no one cares about.

“

The only way to win is to learn faster than anyone else.

- ERIC RIES

”

STEP 3:

Draw the landscape

The background of the slide is a scenic photograph of a hot air balloon festival. Numerous colorful balloons are floating in the sky above a vast, hilly landscape. The scene is captured during the "golden hour" of sunrise or sunset, with a warm, orange glow across the sky and the terrain. The balloons vary in color, including yellows, oranges, reds, and blues. The landscape below features rolling hills and valleys, with some small structures visible in the distance. The overall atmosphere is one of inspiration and achievement.

The Launch Path

Step 3: **Draw the landscape**

Every startup operates within a landscape of competitors and alternatives.

“

I looked at my competitors, and I thought, if they could do it, I could do it. And if they are popular and doing well, I could compete with them. ”

- TOMMY HILFINGER

STEP 4:

Design a engine of growth

The Launch Path

Step 4: **Design an engine of growth**

You're gonna need a business model.

A business model is the rationale by which an organization creates, delivers, and captures value.

“

Luck is not a business model.

- ANTHONY BOURDAIN

”

STEP 5:

Engineer an economic model

The Launch Path

Step 5: Engineer an economic model

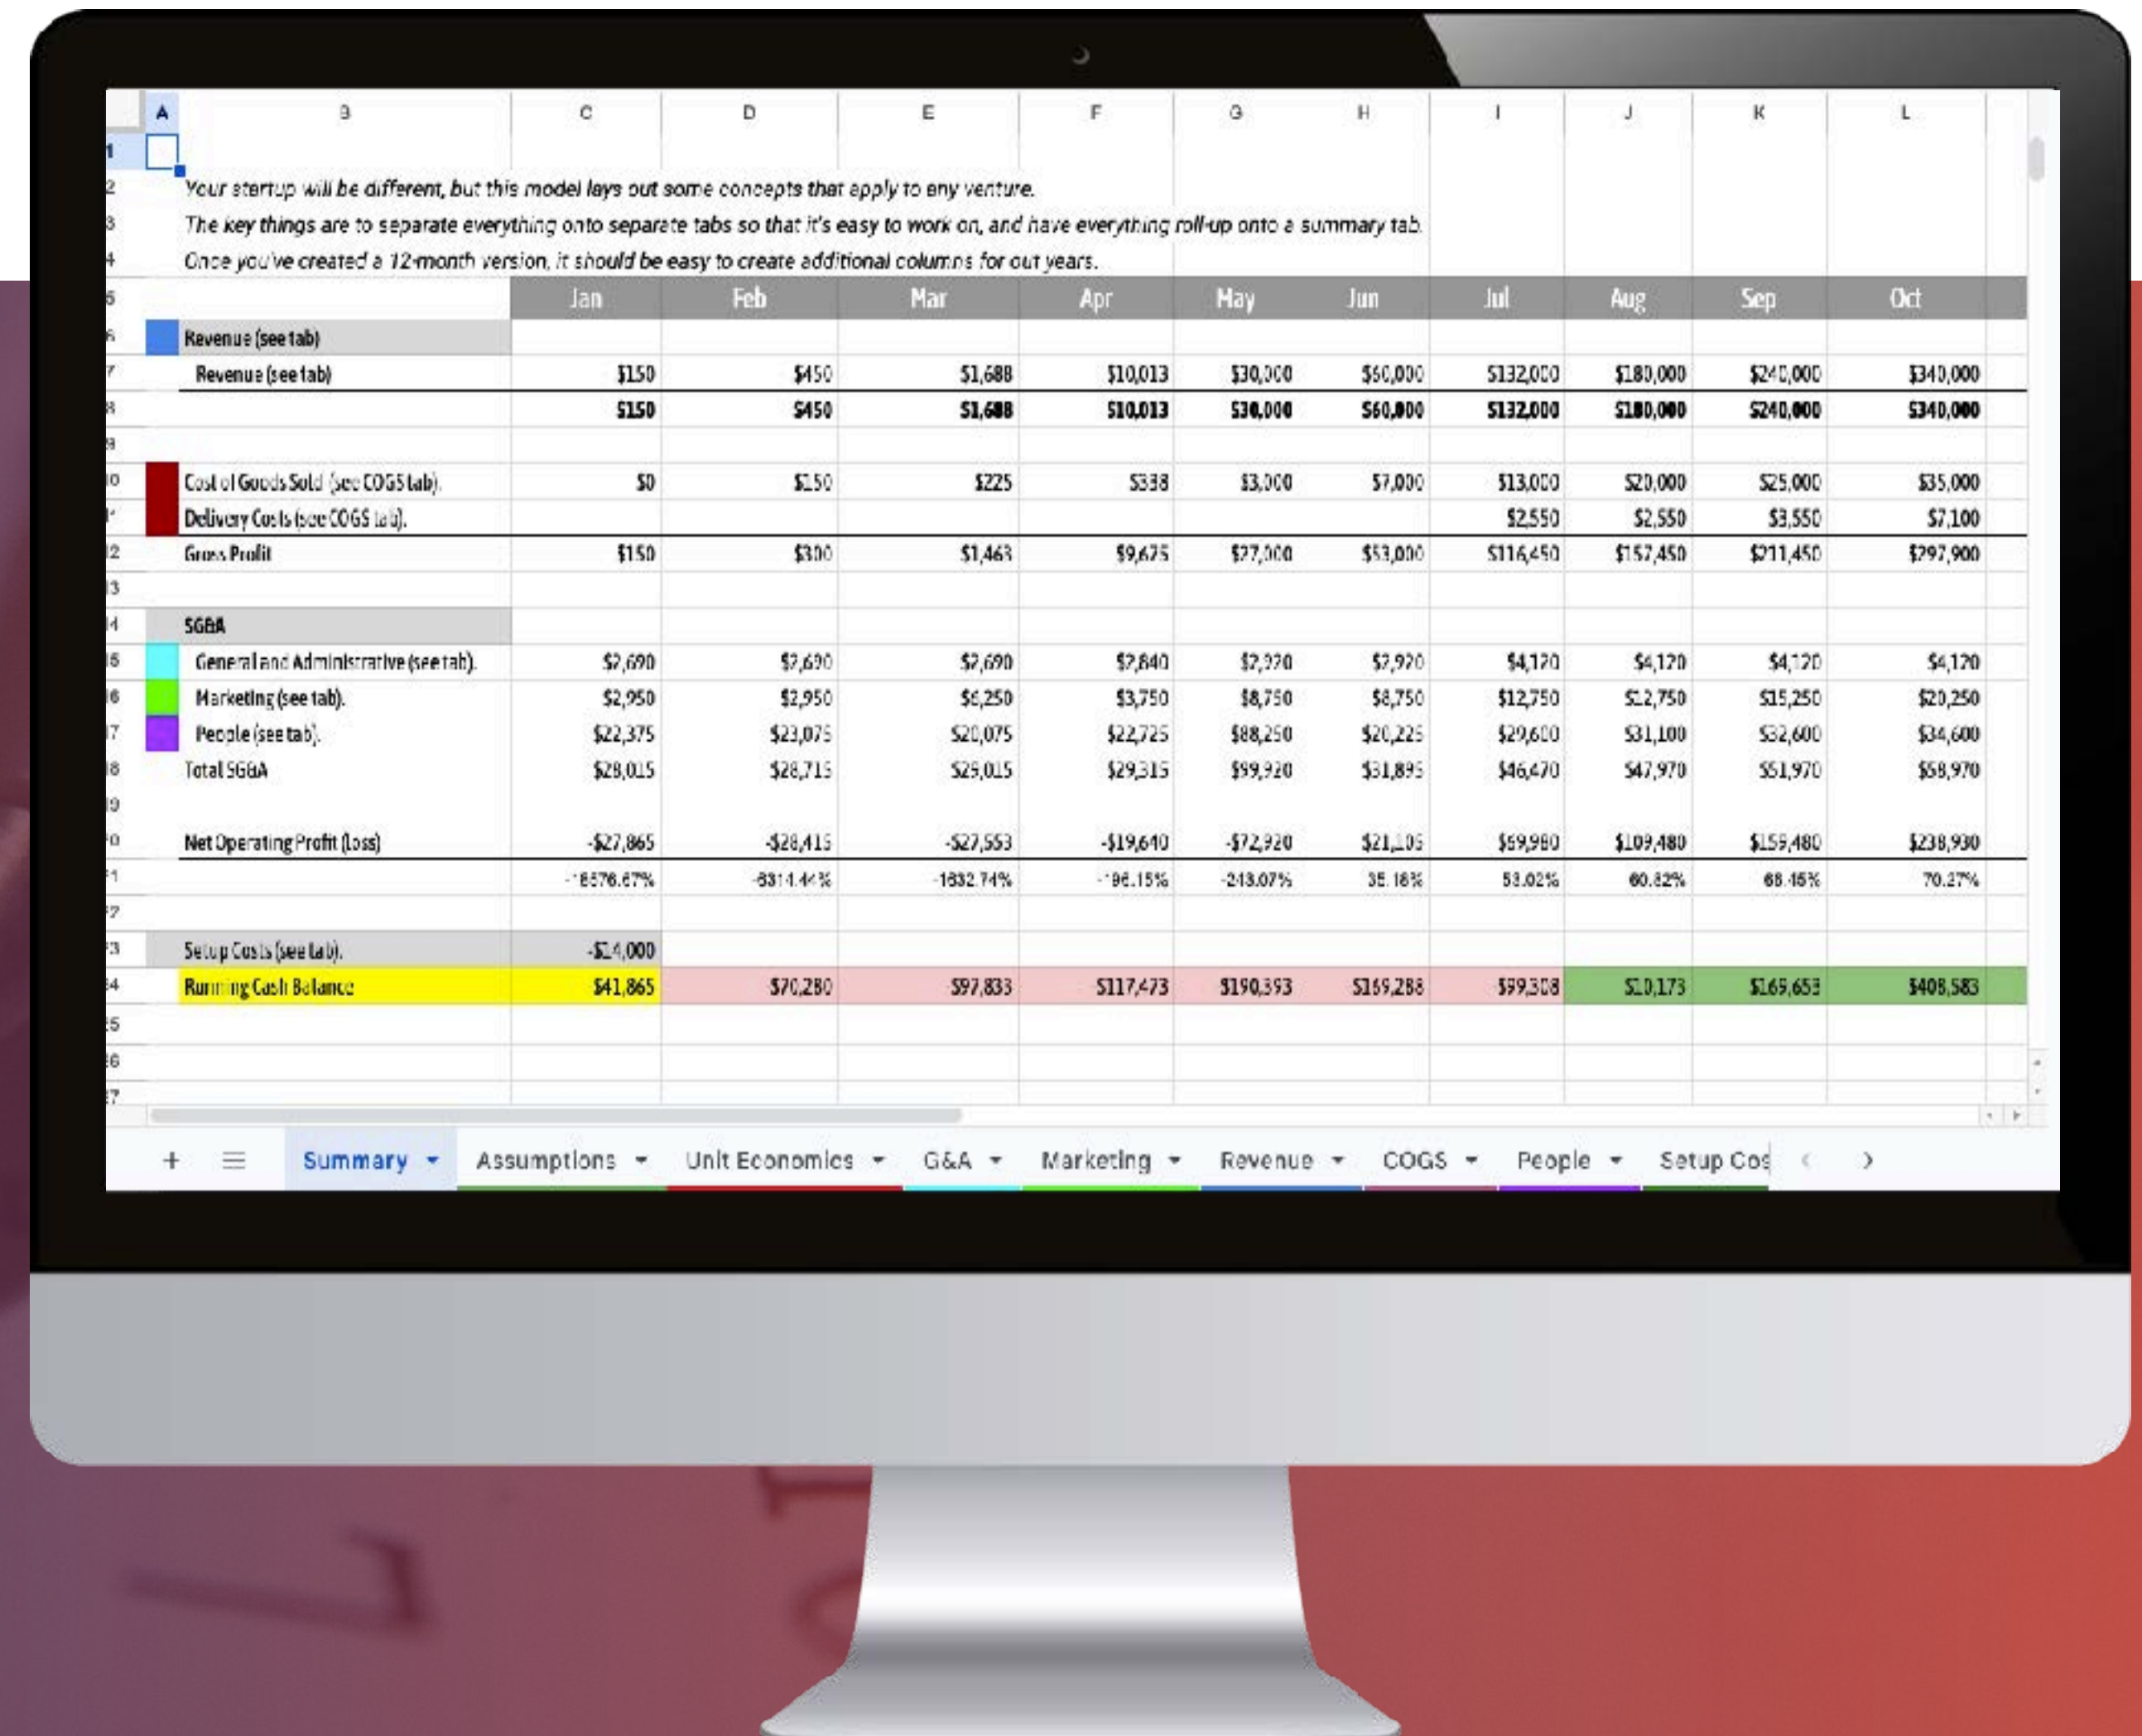

The numbers need to work

“

For every one of our failures, we had spreadsheets that looked great.

- SCOTT COOK

”

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct
Revenue (see tab)										
Revenue (see tab)	\$150	\$450	\$1,688	\$10,013	\$30,000	\$60,000	\$132,000	\$180,000	\$240,000	\$340,000
Cost of Goods Sold (see COGS tab)	\$0	\$250	\$225	\$338	\$3,000	\$7,000	\$13,000	\$20,000	\$25,000	\$35,000

STEP 6:

Develop a capital strategy

The Launch Path

Step 6: **Develop a capital strategy**

There are many great ways to finance a startup venture in 2024.

My goal with this chapter is to open up the solution set a bit in your mind so you can choose the form of financing that makes sense for your particular venture.

It's not just VC. Revenue share notes, demand dividend, SAFE's, royalty-based notes, SIB's and so much more.

“

Be so good they can't ignore you.

- STEVE MARTIN

”

STEP 7:

Frame a funnel

The Launch Path

Step 7: **Frame a funnel**

We need a scalable process for getting customers at a rational cost.

Most startups die from lack of customers. Others die because they realize too late that the economics of their customer acquisition process are impossible to survive. Both are painful deaths, so let's try to avoid them.

“

The purpose of a business is to create and keep a customer.

- PETER DRUCKER

”

STEP 8:

Be a master storyteller

The Launch Path

Step 8: **Be a master storyteller**

Every great entrepreneur has the ability to tell a crisp, clear, and compelling story about what she's working on, and why it matters.

The Launch Path Canvas

Name of Startup Venture: **Fitaco, Inc**

Date:

Prepared by: **Bret Wlakers**

Iteration:

Problem  One clear sentence that articulates the problem your startup solves. <i>Consumers in the US spend \$321 billion/year on fast food, and most of it is really unhealthy.</i> The paradox is that consumers today want to eat healthy, but also have a busy life that often drives them to resort to the convenience of fast food.	Solution  How does your venture solve the problem you have articulated? Keep this short and concise! <i>Fast food doesn't need to be unhealthy. Our startup is developing a new brand of health-conscious fast food (healthy tacos!), delivered directly to your home or office.</i>	Why it matters  Why is this a problem worth solving? <i>The National Institutes for Health say that today a fast food diet may kill more people prematurely every year than cigarettes smoking.</i>	Alternatives  When a customer looks at alternative ways to solve the problem we solve, what will they see? This is a list of competitors and alternatives. Link to a graphic representation of the landscape. <i>There are many food delivery services, from Uber Eats to DoorDash to GrubHub.</i> <i>See visualization at this link.</i>	Customer  It's all about understanding customers. Write a one sentence description of key customer personas and the problem we solve for each. Circle the one that is most influential. <i>Adventurous Alex: A thrill-seeking foodie always on the hunt for unique and spicy taco creations to satisfy their dining palate.</i> <i>Health-Conscious Haley: A fitness enthusiast looking for wholesome and fresh ingredient options that align with their nutritious lifestyle as she requires.</i> <i>Busy Ben: An on-the-go professional seeking quick, flavorful, and portable taco choices to enjoy during a busy workday.</i> <i>Vegetarian Victoria: A plant-based eater in search of flavorful and creative vegetarian and vegan taco selections that cater to their dietary preferences.</i> <i>Traditional Tony: A lover of classic flavors, Tony enjoys indulging in authentic and time-honored recipes that remind him of his cultural heritage.</i>
Path to PMF  What is our path to Product Market Fit? Customer Development, MVP's, etc. <i>1. Farmers' markets where we can get input on our menu items.</i> <i>2. One truck in the Palo Alto area for a pilot project.</i> <i>3. Scale slowly to additional markets, based on our learnings.</i>	Top 3 Benefits  What are the top 3 benefits that your product or services provides to customers? <i>1. Convenience. Use our mobile app to place a custom order and it's delivered directly to you.</i> <i>2. Healthy food, designed by a nutritionist.</i> <i>3. Tacos. Everybody loves tacos.</i>	Distribution  What are our distribution channels? Direct to consumer, via resellers, or? <i>We intend to sell direct to consumer, via our mobile app and website, with delivery via our own vans.</i> <i>In the future, we may be open to distribution partnerships.</i>	Positioning  Within this landscape of competitors and alternatives, how is your venture positioned? <i>Our positioning can basically be summed-up in two words: healthy, and delicious.</i> <i>There are many food delivery apps that can deliver something that is delicious but not very healthy. Or you could eat a late salad.</i> <i>We serve delicious tacos designed by a nutritionist. That's our unique positioning.</i>	Defensibility  What is your secret sauce that is difficult for competitors to copy? <i>The fact that we own the customer and customer data is a big part of our defensibility.</i> <i>A restaurant selling through a 3rd-party like DoorDash owns neither the customer nor the data.</i>
Economics  What are the Unit Economics for this venture, what do we expect the CAC/LTV to look like, and what are our capital needs? (Link to full spreadsheet) <i>One unit = one average order: \$15, newish our gross profit is \$8.50.</i> <i>Early tests indicate CAC of \$11, and we expect an initial LTV of three orders per customer (\$25.50), which will grow with time.</i> <i>Our initial capital needs are \$220K, which will get us through the pilot launch. We will propose to investors amortizing this as a SAFE.</i> <i>See full spreadsheet at this link.</i>	Team  What are the characteristics of the right team to make this venture a success? <i>The right team aligns with our target demographic - people who want to eat healthy and also enjoy the convenience of a quick taco meal.</i> <i>The economics of our venture are such that we'll need diners and cooks who are affordable, so we will work hard to make it an attractive part-time job for students, and a great evening second job for anybody.</i>	Family-Oriented Felix: A parent looking for a family-friendly meal delivery with a variety of options to cater to the taste preferences of both kids and adults.

Iteration:

Problem  One clear sentence that articulates the problem your startup solves. Consumers in the US spend \$331 billion/year on fast food, and most of it is really unhealthy. The paradox is that consumers today <u>want</u> to eat healthy, but also have a busy life that often drives them to resort to the convenience of fast food.	Solution  How does your venture solve the problem you have articulated? Keep this short and concise! Fast food doesn't need to be unhealthy. Our startup is developing a new brand of health-conscious fast food (healthy tacos!), delivered directly to your home or office.	Why it matters  Why is this a problem worth solving? The National Institutes for Health say that today a fast food diet may kill more people prematurely every year than cigarette smoking.	Alternatives  When a customer looks at alternative ways to solve the problem we solve, what will they see? This is a list of competitors and alternatives. Link to a graphic representation of the landscape. There are many food delivery services, from Uber Eats to Doordash to Grubhub. See visualization at this link .	Customer  It's all about understanding customers. Write a one-sentence description of key customer personas and the problem we solve for each. Circle the one that is most influential. Adventurous Alex: A thrill-seeking foodie always on the hunt for unique and spicy taco creations to satisfy their daring palate. Health-Conscious Haley: A fitness enthusiast looking for wholesome and fresh ingredient options that align with their nutritious lifestyle at the taqueria.
Path to PMF  What is our path to Product-Market Fit? Customer Development, MVP's, etc. 1. Farmers' markets where we can get input on our menu items. 2. One truck in the Palo Alto area for a pilot project. 3. Scale slowly to additional markets, based on our learnings.	Top 3 Benefits  What are the top 3 benefits that your product or services provides to customers? 1. Convenience. Use our mobile app to place a custom order and it's delivered directly to you. 2. Healthy food, designed by a nutritionist. 3. Tacos. Everybody loves tacos.	Distribution  What are our distribution channels? Direct to consumer, via resellers, or? We intend to sell direct-to-consumer, via our mobile app and website, with delivery via our own vans. In the future, we may be open to distribution partnerships.	Positioning  Within this landscape of competitors and alternatives, how is your venture positioned? Our positioning can basically be summed-up in two words: <u>healthy</u> , and <u>delicious</u> . There are many food delivery apps that can deliver something that is delicious but not very healthy. Or you could eat a kale salad. We serve delicious tacos designed by a nutritionist. That's our unique positioning.	Busy Ben: An on-the-go professional seeking quick, flavorful, and portable taco choices to enjoy during a busy workday. Vegetarian Victoria: A plant-based eater in search of flavorful and creative vegetarian and vegan taco selections that cater to their dietary preferences. Traditional Tony: A lover of classic flavors, Tony enjoys indulging in authentic and time-honored taco recipes that remind him of his cultural heritage.
Economics  What are the Unit Economics for this venture, what do we expect the CAC<LTV to look like, and what are our capital needs? (Link to full spreadsheet). One unit = one average order: \$15, on which our gross profit is \$8.50. Early tests indicate CAC of \$11, and we expect an initial LTV of three orders per customer (\$25.50), which will grow with time. Our initial capital needs are \$220K, which will get us through the pilot launch. We will propose to investors structuring this as a SAFE. See full spreadsheet at this link .	Team  What are the characteristics of the right team to make this venture a success? The right team aligns with our target demographic - people who want to eat healthy and also enjoy the convenience of a quick taco meal. The economics of our venture are such that we'll need drivers and cooks who are affordable, so we will work hard to make it an attractive part-time job for students, and a great evening second job for anybody.	Defensibility  What is your secret sauce that is difficult for competitors to copy? The fact that we own the customer and customer data is a big part of our defensibility. A restaurant selling through a 3rd-party like Doordash owns neither the customer nor the data.	Family-Oriented Felix: A parent looking for a family-friendly meal delivery with a variety of options to cater to the taste preferences of both kids and adults. Budget-Conscious Bella: A student or frugal diner in pursuit of affordable yet flavorful taco choices that won't break the bank at the taqueria.

AI

**John McCarthy,
Professor at Stanford University
Coined the term “Artificial Intelligence” in 1956.**

What island has benefited from AI more than any other?

Internet top level domain names (TLDs) are assigned to countries (.uk, .pt, .es).

The TLD “.ai” is owned by the island nation of Anguilla.

**NORTH ATLANTIC
OCEAN**

**TURKS AND
CAICOS ISLANDS**

**BRITISH
VIRGIN ISLANDS**

ANGUILLA

SAINT MARTIN

**ANTIGUA AND
BARBUDA**

**SAINT
KITTS**

CARIBBEAN SEA

In 2024, the island country of Anguilla had \$32 million in revenue from selling “.ai” domain names – representing over 20% of the government’s income.

The Gartner Hype Cycle

So where are we with AI right now?

Generative AI (ChatGPT, etc) is having a big impact on everything right now.

We'll look at some of the ways that launching a startup can be accelerated with these tools.

Have experiences and recommendations? Post them for your classmates in the [#ai_for_startups](#) channel on Slack!

Stanford CSP BUS-217, Spring 2025

If you will submit this it will help me to understand your background so that I can tailor the course material appropriately. Thanks very much! Looking forward our first session on Wednesday, April 9.

01 /10 | Are you living a healthy life?

When it comes to following a healthy diet, smoking is considered to be one of the biggest evils risking our health. From the risk of developing cancer, cardiac complications, breathing difficulties and the danger of catching second-hand smoke, there is a very valid reason to say no to smoking.

Fast food kills - and yet we buy a lot of it.

“A fast food diet increase your chances of developing depression, cancer, type 2 diabetes, heart disease and other chronic conditions.” -Cleveland Clinic.

**“Over the past 50 years, the health of Americans has gotten worse, Today, eating processed foods and fast foods may kill more people prematurely than cigarette smoking”.
- National Institutes for Health**

**“The health benefits of a natural, plant-based diet have been established by numerous research studies”
- Stanford School of Medicine**

Problem Statement for Bret's awesome new startup:

Americans spend over \$300B/year on unhealthy fast food, and it's become a leading cause of premature death. Most people want to eat healthy, but with a busy life it's hard sometimes.

Bret's awesome new startup:

Americans spend over \$300B/year on unhealthy fast food, and it's become a leading cause of premature death. Most people want to eat healthy, but with a busy life it's hard sometimes.

Over the course of the next eight weeks, I will produce deliverables of each step, as examples you can refer to as you develop your own startup idea.

Americans spend over \$300B/year on unhealthy fast food, and it's become a leading cause of premature death. Most people want to eat healthy, but with a busy life it's hard sometimes. (edited)

Your first assignment is to write a simple and clear statement of the problem your startup solves, and post it to the #problem_statement channel on Slack.

You are not writing marketing copy, so no buzzword mumbo jumbo! Just a nice, simple, clear articulation of the problem your startup solves.

Frame it as a problem from a customer perspective. In other words, we're not fixing the fact that most fast food is unhealthy – we're fixing the fact that most consumers want to eat healthy but often don't feel as if they have the time.

Administrative details.

If you are taking the class for a grade, you have one deliverable at the end of the course:

- A short slide deck about a startup venture, demonstrating that you understood the concepts we discussed in the course.
- You can choose whether to present it in class or not.
- Due to me before the final class session.

Administrative details:

Eight Wednesdays, 7pm - 8:50pm.

Grade will be based on attendance, participation, and one deliverable.

Interactive format - ask questions, and bring thoughts!

Be respectful, raise your hand, ask good questions and let others do the same.

Our primary communication between classes will be Slack.

I'll give you 100% and ask that you please do your part.

CO
HO

Every week I'll be at the
CoHo an hour before class.

Join if you want for food,
beverages, discussion.

Purely optional.

Want to volunteer to lead a Zoom-based study group with weekly calls?

Let me know.

bus217.org

On the class website you will find recaps of each class session, additional reading, assignments, videos, etc.

Our Slack Workspace

The screenshot displays a Slack workspace interface. On the left is a dark purple sidebar with navigation icons for Home, DMs, Activity, and More. Below these are sections for Channels and Direct messages. The Channels section lists: # ai-for-startups, # announcements, # problem-statement, and # social (which is highlighted). Below Channels is a section for Direct messages listing several team members: Abdi Hariri, Ranjana Soni, Alesya, Alison Rowe, Arnaud Gillard, Chris Hyle, Cindy Lin, Deepa Paranjpe, Elizabeth Z. Goodwin, and Esra Hadi.

The main area shows the # social channel. At the top, it indicates '18 days left in trial'. The channel header shows '# social' with 31 members. The messages list includes:

- A message from an unnamed user: "In my spare time, I like to hike, connect with people from varied backgrounds and cultures, and try new restaurants and foods. I'm looking forward to meeting you all in person on Wednesday!! (edited)" with 3 thumbs up. It is dated Monday, April 7th.
- A message from Alison Rowe at 5:29 PM: "Hi everyone! My name is Allie. I look forward to meeting everyone. I am figuring out if there is a market, and how to reach it, for my business idea, Dog's Best Friend. I'd like to create hyper-local networks for pre-vetted people to borrow dogs from dog parents for a walk, an afternoon, or weekend. Borrowers get all of the benefits of dog ownership, without the responsibility or expense. People may not be able to have a dog in their apartment, their busy lives preclude caring for one, singles can meet new people easily when walking a puppy, or kids want to borrow a dog for a holiday break. DBF is an affordable subscription model in a market that is dominated by (expensive) pay-per-service gig worker models. The business is really fun and has big potential! For fun I love to sail for fun, race sailboats, hike locally, read. I now spend quite a bit of time volunteering at the SF SPCA to walk dogs, photograph puppies, and help wherever I can so the dogs are relaxed and ready for adoption." (edited) with 3 hearts and 1 thumbs up.
- A message from Abdi Hariri at 7:07 AM: "Hi everyone, I am Abdi and I have spent 35 years in Tech, mostly in Semiconductors which means I am basically a silicon based dinosaur 🦕 but a very happy one. I was lucky enough to have done every job in a public company but the biggest thrill was to be part of the biggest turn around in the semiconductor industry. What I enjoy most? Building new businesses and helping people succeed- nothing beats that. I am here to learn from everyone as I try to navigate the next chapter." with 1 thumbs up.

Make it easy for your classmates to get to know you by using the same name across everything in class.

Be like Alesya!

Name:

~~Samuel Robert Smith~~

Alesya Pyrkova

Name Tag:

Slack:

Zoom:

Some of you are sippers.

Some of you are gulpers.

If you want to sip this class:

**All you need to do is show up on Wednesday
nights and have something interesting to say.**

If you want to gulp this class:

Regular Wednesday night class sessions - be active in discussions.

Produce deliverables for our own startup for each step on The Launch Path.

Participate in Slack discussions with classmates.

Join the pre-class discussions at the CoHo.

Choose to present your own startup idea to the class.

Join the optional calls we will have occasionally.

I have designed this course to be satisfying for both sippers and gulpers.

My goals for our time together:

Introduce you to a set of frameworks that will be helpful for any sort of new venture - tech, non-tech, social venture, etc.

Create an environment of knowledge-sharing and cross-pollination so that you learn from each other.

Have fun and make life-long connections.

This week's assignments:

- In the **#problem_statement** channel on Slack, share a short, concise statement of the problem your startup solves.
- In the **#social** channel on Slack, post a photo of a favorite food that you grew up with.

33

1999

San Francisco, 1849

The population of San Francisco increased from 1,000 to 25,000 in less than two years.

San Francisco, 1849

The population of San Francisco increased from 1,000 to 25,000 in less than two years.

CALIFORNIA GOLD RUSH 1849

USA
33

1999

The “49ers” were known as hard-working, resourceful entrepreneurs.

They traveled thousands of miles to get to California, where they mined for gold, built stores, launched businesses, and created jobs.

Leland Stanford

A famous 49er.

Leland Stanford

Grew up in New York, went to law school.

Lost everything in a fire.

Decided to join the California Gold Rush.

1852, owned a general store for miners.

1856, opened more businesses in Sacramento.

1861, co-founded the Central Pacific Railroad.

1868, co-founded Pacific Union and then merged with Wells Fargo & Company.

Built the transcontinental railroad.

The Call-Chronicle-Examiner

SAN FRANCISCO, THURSDAY, APRIL 18, 1906.

EARTHQUAKE AND FIRE: SAN FRANCISCO IN RUINS

THE EARTHQUAKE OF APRIL 18, 1906, AT SAN FRANCISCO, CALIFORNIA, WAS ONE OF THE MOST DEVASTATING IN THE HISTORY OF THE UNITED STATES. IT DESTROYED OR DAMAGED OVER 80 PER CENT OF THE BUILDINGS IN THE CITY, AND CAUSED THE DEATH OF OVER 3,000 PEOPLE. THE FIRE WHICH BROKE OUT IN THE AFTERMATH OF THE EARTHQUAKE DESTROYED ANOTHER 25 PER CENT OF THE CITY, LEAVING ONLY A REMAINDER OF THE PRE-WAR CITY.

THE EARTHQUAKE BEGAN AT 5:12 P.M. ON APRIL 18, 1906, AND LASTED FOR ABOUT 15 SECONDS. IT WAS FELT IN A LARGE AREA OF THE WESTERN UNITED STATES, AND IN SOME PLACES IT WAS MORE DEVASTATING THAN IN OTHERS. IN SAN FRANCISCO, THE DAMAGE WAS EXTENSIVE, AND THE LOSS OF LIFE AND PROPERTY WAS GREAT.

THE FIRE WHICH BROKE OUT IN THE AFTERMATH OF THE EARTHQUAKE WAS CAUSED BY THE FALLING OF GAS PIPES AND OTHER STRUCTURES. IT SPREAD RAPIDLY, AND DESTROYED A LARGE AREA OF THE CITY. THE FIRE WAS NOT CONTROLLED UNTIL THE NEXT DAY, AND IT TOOK SEVERAL WEEKS TO REPAIR THE DAMAGE.

THE EARTHQUAKE AND FIRE TOGETHER DESTROYED OVER 80 PER CENT OF THE BUILDINGS IN SAN FRANCISCO. THE LOSS OF LIFE AND PROPERTY WAS GREAT, AND THE CITY WAS LEFT IN RUINS. THE REPAIRS TO THE CITY TOOK SEVERAL YEARS, AND THE CITY WAS NOT THE SAME AS BEFORE.

The home of Leland and Jane Stanford after 1906 earthquake.

Then tragedy struck.

**Their only child,
Leland Stanford Jr,
died at 15.**

In their grief, Leland Stanford and his wife Jane decided to launch a new startup venture in their son's memory, on the land they owned in Santa Clara Valley.

It was an innovative new startup.

- “A university which will fit the graduate for some useful pursuit”.
- “To prohibit religious instruction, but to teach the immortality of the soul.”
- “To afford equal facilities and give equal advantages to both sexes”.

Stanford University, Founded 1891

Federal Telegraph Company, Emerson Street, Palo Alto

**Lee DeForest
Federal Telegraph
Company
Palo Alto**

**While working on
developing a “next-
generation telegraph”,
he invented of the
vacuum tube amplifer.**

January 25, 1915 at the World's Fair in San Francisco, Lee DeForest's tube amplifier was used for the first transcontinental phone call.

Chapter 3:

Tubes.

Lee DeForest
Federal Telegraph Company
Palo Alto

His invention, the vacuum tube amplifier, became the one device to rule them all.

Lee Deforest's new invention controlled the flow of electrons and the field became known as "electron-ics".

Stanford University created new courses, studies, and research in this new field of “electronics”.

For the entire first half of the twentieth century, vacuum tubes were what drove the development of radio, television, radar, sound recording and reproduction, long distance telephone networks, home entertainment systems, and more.

For the entire first half of the twentieth century, vacuum tubes were what drove the development of radio, television, radar, sound recording and reproduction, long distance telephone networks, home entertainment systems, and more.

New York, N.Y., Monday, January 11.

SILICON VALLEY U.S.A.

(This is the first of a three-part series on the history of the semiconductor industry in the Bay Area, a behind-the-scenes report of the men, money, and litigation which spawned 23 companies — from the fledgling rebels of Shockley Transistor to the present day.)

By DON C. HOEFER

It was not a vintage year for semiconductor start-ups. Yet the 1970 year-end box score on the San Francisco Peninsula and Santa Clara Valley of California found four more new entries in the IC sweeps, one more than in 1969.

The pace has been so frantic that even hardened veterans of the semiconductor wars find it hard to realize that the Bay Area story covers an era of only 15 years. And only 23 years have passed since the invention of the transistor, which made it all possible.

For the story really begins on the day before Christmas Eve, Dec. 23, 1947. That was the day, at Bell Telephone Laboratories in Murray Hill, N.J., three distinguished scientists, Dr. John Bardeen, Dr. Walter Brattain and Dr. William Shockley, demonstrated the first successful transistor. It was made of germanium, a point-contact device that looked something like a crystal detector, complete with cat's whiskers.

The three inventors won the Nobel Prize for their efforts, but only one of them, Dr. Shockley, was determined to capitalize on the transistor commercially. In him lies the genesis of the San Francisco silicon story.

It was only by a quirk of fate, however, coupled with lack of management foresight, that Boston failed to become the major semiconductor center San Francisco is today. When Dr. Shockley left Bell Labs in 1954, he headed first for New England to become a consultant to Raytheon Co., with a view toward establishing a semiconductor firm there under its auspices.

His financial plan called for a guarantee to him of \$1 million over a 3-year period — hardly unreasonable by today's standards. But the Raytheon management 16 years ago couldn't see it, so Dr. Shockley left the company after only 1 month.

The Apple I.

APPLE Computer Company • 770 Welch Rd., Palo Alto, CA 94304 • (415) 326-4248

OCTOBER 1976

CIRCLE NO. 7 ON INQUIRY CARD

INTERFACE AGE 11

Apple Introduces the First Low Cost Microcomputer System with a Video Terminal and 8K Bytes of RAM on a Single PC Card.

The Apple Computer. A truly complete microcomputer system on a single PC board. Based on the MOS Technology 6502 microprocessor, the Apple also has a built-in video terminal and sockets for 8K bytes of on-board RAM memory. With the addition of a keyboard and video monitor, you'll have an extremely powerful computer system that can be used for anything from developing programs to playing games or running BASIC.

Combining the computer, video terminal and dynamic memory on a single board has resulted in a large reduction in chip count, which means more reliability and lowered cost. Since the Apple comes fully assembled, tested & burned-in and has a complete power supply on-board, initial set-up is essentially "hassle free" and you can be running within minutes. At \$666.66 (including 4K bytes RAM!) it opens many new possibilities for users and systems manufacturers.

You Don't Need an Expensive Teletype.

Using the built-in video terminal and keyboard interface, you avoid all the expense, noise and maintenance associated with a teletype. And the Apple video terminal is six times faster than a teletype, which means more throughput and less waiting. The Apple connects directly to a video monitor (or home TV with an inexpensive RF modulator) and displays 960 easy to read characters in 24 rows of 40 characters per line with automatic scrolling. The video display section contains its own 1K bytes of memory, so all the RAM memory is available for user programs. And the

Keyboard Interface lets you use almost any ASCII-encoded keyboard.

The Apple Computer makes it possible for many people with limited budgets to step up to a video terminal as an I/O device for their computer.

No More Switches, No More Lights.

Compared to switches and LED's, a video terminal can display vast amounts of information simultaneously. The Apple video terminal can display the contents of 192 memory locations at once on the screen. And the firmware in PROMS enables you to enter, display and debug programs (all in hex) from the keyboard, rendering a front panel unnecessary. The firmware also allows your programs to print characters on the display, and since you'll be looking at letters and numbers instead of just LED's, the door is open to all kinds of alphanumeric software (i.e., Games and BASIC).

8K Bytes RAM in 16 Chips!

The Apple Computer uses the new 16-pin 4K dynamic memory chips. They are faster and take 1/4 the space and power of even the low power 2102's (the memory chip that everyone else uses). That means 8K bytes in sixteen chips. It also means no more 28 amp power supplies.

The system is fully expandable to 65K via an edge connector which carries both the address and data busses, power supplies and all timing signals. All dynamic memory refreshing for both on and off-board memory is done automatically. Also, the Apple Computer can be upgraded to use the 16K chips when they become availa-

ble. That's 32K bytes on-board RAM in 16 IC's—the equivalent of 256 2102's!

A Little Cassette Board That Works!

Unlike many other cassette boards on the marketplace, ours works every time. It plugs directly into the upright connector on the main board and stands only 2" tall. And since it is very fast (1500 bits per second), you can read or write 4K bytes in about 20 seconds. All timing is done in software, which results in crystal-controlled accuracy and uniformity from unit to unit.

Unlike some other cassette interfaces which require an expensive tape recorder, the Apple Cassette Interface works reliably with almost any audio-grade cassette recorder.

Software:

A tape of APPLE BASIC is included free with the Cassette Interface. Apple Basic features immediate error messages and fast execution, and lets you program in a higher level language immediately and without added cost. Also available now are a dis-assembler and many games, with many software packages, (including a macro assembler) in the works. And since our philosophy is to provide software for our machines free or at minimal cost, you won't be continually paying for access to this growing software library.

The Apple Computer is in stock at almost all major computer stores. (If your local computer store doesn't carry our products, encourage them or write us direct). **Dealer inquiries invited.**

BEGINNING OF THE INTERNET AGE

On August 27, 1976, scientists from SRI International celebrated the successful completion of tests by sending an electronic message from a computer set up at a picnic table behind the Alpine Inn. The message was sent via a radio network to SRI and on through a second network, the ARPANET, to Boston. This event marked the beginning of the Internet Age.

Google Receives \$25 Million in Equity Funding

Sequoia Capital and Kleiner Perkins Lead Investment; General Partners Michael Moritz and John Doerr Join Board

Palo Alto, Calif. – June 7, 1999 – Google, a start-up dedicated to providing the best search experience on the web, today announced it has completed a \$25 million round of equity funding led by Sequoia Capital and Kleiner Perkins Caufield & Byers.

Google also announced that Michael Moritz, general partner of Sequoia Capital, and John Doerr, general partner of Kleiner Perkins Caufield & Buyers, have joined its board of directors. Michael Moritz is currently a director of numerous companies, including Yahoo, eToys, Quote.com, eGroups, PlanetRx, Flextronics, and WebVan. John Doerr was a co-founder of @Home and is a director of several high growth internet companies, including Amazon.com, Drugstore.com, Handspring, Healtheon/WebMD, Homeshop.com, Intuit, and Sun Microsystems.

"We are delighted to have venture capitalists of this caliber help us build the company," said Larry Page, CEO and co-founder of Google. "We plan to aggressively grow the company and the technology so we can continue to provide the best search experience on the web."

Google employs several key technologies to generate search results of unprecedented accuracy and quality. These technologies extend Stanford University research into large-scale data mining of the Web. "A perfect search engine will process and understand all the information in the world," said Sergey Brin, Google president and co-founder of Google. "That is where Google is headed."

Raised \$25M from Kleiner in 1999.
Had an IPO in 2004 with a market cap of \$23 billion.

A Palo Alto guy named Elon Musk.

Co-Founded Zip2, sold it for \$300M.

A screenshot of the Zip2 website interface. The header features the Zip2 logo and the URL www.zip2.com. The main content area is divided into several sections: 'find a business near you' with a search bar and radio buttons for 'business type (toys)' and 'business name (Joe's Toys)'; 'look near this location:' with a 'local address' and 'city/state' dropdown menu, a 'Near My Home' button, and a 'Search' button; 'or browse categories...' with a grid of links for various business categories like 'apparel', 'auto', 'community', etc.; 'get directions' and 'get a map' buttons with car and map icons; 'shop online' with a 'Click Here for Holiday Shopping!!' button and a 'click here for holiday savings!' button; and a list of cities including Augusta, Boston, Bakersfield, Charlotte, Detroit, Hampton Roads, Houston, Jacksonville, Miami, New York, S.F. Bay Area, Seattle, So. California, St. Paul, and Other cities... The footer contains copyright information: '©1998 Zip2 Corp. Portions ©1998 Zip2 Corporation. All rights reserved. By using our site, you agree to our terms of use.'

Elon Musk became part of the founding team at PayPal.

Peter Thiel

Elon Musk

Two years after founding, PayPal was acquired by eBay for \$1.5 billion.

The founders went on to found a slew of new companies.

The PayPal Mafia

Jawed Karim and Chad Hurley founded **YouTube**
Jeremy Stopelman and Russel Simmons founded **Yelp**.

David Sacks, founded **Yammer**

Peter Thiel, wrote check that launched **Facebook**.

Reid Hoffman, founded **LinkedIn**.

Max Levchin founded **Slide**, VP Eng at **Google**, founded **Affirm**.

Elon Musk, founded **SpaceX**, **Tesla**, **The Boring Co**.

TEA

Lots of old white men.

But now let's talk about the women.

- **Two years after Stanford University was founded, Leland Stanford died.**

- **Two years after Stanford University was founded, Leland Stanford died.**
- **Jane Stanford ran it for more than a decade, building it into a world-class institution.**
-

Elizabeth J. Feinler

Director, Network Information Center
Stanford Research Institute

Beginning in 1974, her group was the overall naming authority of the Internet, developing and managing the name registries of the top-level domains including .mil, .gov, .edu, .org, and .com.

She manually managed the HOSTS.TXT file with every domain name and IP address on the internet. Every single connection on the internet referred to her file which she updated daily.

In 1986 the DNS (Domain Name System) protocol was developed. Today 600 DNS root servers around the world do the job that one woman once did by hand.

Johanna Hoffman

**Only woman on the Mac team.
Only person who
could stand up to Steve Jobs**

Aileen Lee

**Founded first woman-led VC firm.
Coined the term startup unicorn.**

Katrina Lake

**Founded StitchFix
Took it public at the age of 34.**

**Sheryl Sandberg
Google and Facebook
Now investor.**

Katie Haun

**Launched \$1.5B
Haun Ventures, March 2022**

Susan Wojcicki

**First Marketing Mgr at Google
CEO of YouTube
Her net worth is >\$600M**

OK, now back to our story.

Chapter 8: Mobile/Social

Even though much of telephone technology was developed in Silicon Valley, it was slow to get into the mobile phone business.

Ericsson from Sweden

Motorola from Chicago

Blackberry from Canada

Nokia from Finland

2007

**Apple announces iPhone.
2007**

**Google buys Android.
2008**

Billion dollar apps, founded here.

Uber

facebook®

**Today there are 1.46 billion iPhone users.
And 3.92 billion Android users.**

**That's 5.38 billion iPhone and Android
users on a planet of 7.83 billion people.**

**This may be the most impactful thing
developed in Silicon Valley.**

A close-up, high-angle shot of a person's hands holding a white smartphone. The person has long, wavy blonde hair and is wearing a red and white plaid shirt with a white and blue striped undershirt. They are also wearing a white beaded bracelet on their right wrist. The background is a blurred outdoor setting with green grass and brown soil. The text is overlaid in the bottom left corner in a bold, white, sans-serif font.

**Anyone on the planet who has one of these
is connected to all the information
available in the world today.**

Apple TAPTIC ENGINE

The entire history of Silicon Valley is inside:

Amplifier invented by Lee DeForest.

Transistors invented by William Shockley

Semiconductor chips invented by Moore and Noyce

TCP/IP Internet connection, invented by SRI

Web Browser invented by Marc Andreessen

Search developed by Larry and Sergey.

And lots and lots of silicon.....

A culture of reinvestment.

Now, the next generation is underway.

Today there is more opportunity than ever.

**AI, Machine Learning, Autonomous Vehicles,

Deep Learning, New EV technologies,
AgTech, and much more.**

A satellite image of Earth showing the continent of South America, including Brazil and parts of Colombia and Venezuela. The Amazon rainforest is visible as a large green area. To the west, in the Pacific Ocean, a large hurricane with a distinct eye is visible. The surrounding oceans are a deep blue, and there are scattered white clouds. The text "The next decade will be a golden area for global entrepreneurs." is overlaid in white, bold, sans-serif font across the center of the image.

**The next decade will be a golden area
for global entrepreneurs.**

A photograph of the Stanford University Main Quad at dusk. The central focus is the large, arched gateway, known as the Main Quad Arch, which is illuminated from within. The archway is flanked by two long, two-story buildings with a series of arches. Tall palm trees are scattered throughout the quad, some in the foreground and others in the background. In the foreground, there are several wooden benches and a paved walkway. The sky is a deep blue, and the overall atmosphere is serene and welcoming. The text "Welcome to Stanford Campus." is overlaid at the bottom of the image in a white, bold, sans-serif font.

Welcome to Stanford Campus.
